

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

1.2 – Purpose of the Project

- I. The goal of this project "Visualizing Housing Market Trends: An Analysis of Sale Prices and Features Using Tableau " is to look at housing market data and show people what it means in a way that is easy to understand. This project wants to help people see how things like the price of a house how big the basement is, how old the house is, if it has been renovated and how bedrooms and bathrooms it has affect how much a house is worth.
- II. The project uses Tableau to turn housing data into simple charts and graphs that people can look at and understand. These pictures and graphs help people see what is happening in the housing market compare houses and make good decisions based on what they see.
- III. Main Purposes:
 - To look at what's happening in the housing market and how houses are being sold.
 - To figure out what makes house prices go up or down.
 - To show housing data in a way that's easy to use and understand.
 - To compare houses that have been renovated with ones that have not.
 - To help people who are buying or selling houses, real estate agents and investors make decisions.
- IV. To show how well Tableau works for looking at and understanding data.
- V. Overall the project gives people a view of the housing market and helps them get useful information from housing data by using pictures and graphs to explain it. The project Visualizing Housing Market Trends: An Analysis of Sale Prices and Features Using Tableau is, about making housing data easy to understand.

1.2– Purpose of the Project

The primary purpose of this project is to analyze and visualize housing market data using **Tableau** to identify patterns, trends, and factors that influence property sale prices. By

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

converting raw housing data into interactive dashboards and visual reports, the project enables users to gain meaningful insights and make data-driven decisions.

Objectives of the Project

1. **Analyze Housing Market Trends**
 - a. Study historical housing data to identify trends in property sale prices over time.
2. **Understand the Impact of Property Features**
 - a. Examine how factors such as house size, number of bedrooms, bathrooms, floors, basement area, and renovation status affect sale prices.
3. **Create Interactive Visualizations**
 - a. Develop user-friendly Tableau dashboards that present housing data through charts, graphs, maps, and filters for easy analysis.
4. **Support Better Decision-Making**
 - a. Provide valuable insights that help home buyers, sellers, investors, and real estate professionals make informed decisions.
5. **Identify Market Patterns**
 - a. Detect relationships between different housing features and property values to understand market behavior.
6. **Simplify Complex Data**
 - a. Transform large and complex datasets into clear, meaningful, and easy-to-understand visual reports.
7. **Improve Data Analysis Skills**
 - a. Demonstrate the use of Tableau's visualization capabilities, including dashboards, stories, filters, and calculated fields, for effective business intelligence.
8. **Provide Business Insights**
 - a. Generate actionable insights that can assist in pricing strategies, investment planning, and market analysis.
