### 2.3 – Brainstorming

#### Brainstorming – *Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau*

##### Project Idea

The real estate market generates a large amount of data, making it difficult to identify the factors that influence house prices. This project uses Tableau to transform raw housing data into interactive dashboards and visualizations. By analyzing sale prices, property features, and location-based information, the project helps users understand market trends and make informed decisions.

##### Problem Statement

Housing market data contains numerous variables such as sale price, house size, number of bedrooms, bathrooms, floors, location, renovation status, and construction year. Analyzing these variables manually is challenging and often leads to unclear insights. There is a need for an interactive visualization tool that can simplify complex housing data and highlight the key factors affecting property prices.

##### Brainstorming Ideas

1. Analyze the average sale price of houses.
2. Compare house prices by location or zip code.
3. Identify the relationship between house size and sale price.
4. Study the impact of bedrooms and bathrooms on property value.
5. Compare renovated and non-renovated houses.
6. Analyze house age and renovation trends.
7. Visualize basement area and living area distributions.
8. Find the highest and lowest priced properties.

## Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

---

9. Create yearly sales trend analysis.
10. Build interactive dashboards with filters for location, price range, bedrooms, and bathrooms.

### Objectives

- 1.Transform raw housing data into meaningful visualizations.
- 2.Identify patterns and trends in property sales.
- 3.Compare housing features and their influence on prices.
- 4.Develop interactive Tableau dashboards for easy analysis.
- 5.Support buyers, sellers, and real estate professionals in making data-driven decisions.
