PROJECT TITLE	Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
MAX MARKS	2 MARKS

CHAPTER – III REQUIREMENT ANALYSIS

3.1 – Customer Journey Map

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

Data & Analytics Foundation

1. **Data Integration:** Blending historical property data from sources like **Zillow** (pricing, listings) and **Kaggle** datasets.
2. **Exploratory Data Analysis (EDA):** Handling messy data, removing pricing outliers, and building price distribution histograms to understand market variance.
3. **Feature Engineering:** Identifying and calculating the statistical correlation between specific housing features (like property age or square footage) and the final sale price.

Critical Housing Matters (The Core Variables)

4. The map specifically tracks how a data analyst evaluates core real estate metrics:
5. **Physical Metrics:** Evaluating how **Square Footage** and **Property Age** directly impact valuation.
6. **Geospatial Dynamics:** Analyzing **Neighborhood vs. Square Footage** to see how location premiums alter property value.
7. **Market Timing:** Determining the right window for buying, selling, or investing based on trend data.

Tableau Dashboard Artifacts

8. The final phase of the subject matter focuses on turning raw data into visual tools:
9. **Feature Importance Ranker:** A breakdown showing stakeholders exactly which features drive up house prices the most.
10. **Geospatial Price Explorer:** An interactive map that allows users to click on different neighborhoods to view localized pricing trends.
11. **Investment Guide:** A strategic dashboard designed to help stakeholders make data-driven decisions on market timing.
