

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

TEAM ID	SWTID2026-3387
PROJECT TITLE	Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
MAX MARKS	2 MARKS

3.2 – Solution Requirement

Scope & Objective

1. **Problem Statement:** Understanding the direct relationship between specific property attributes (e.g., location, size, age) and final sale prices to drive informed real estate investment strategies.
2. **Target Timeline:** Analyzing residential real estate data over a defined multi-year market window (2018–2023).

User Personas & Stories

3. The solution explicitly caters to two core user profiles:
4. **Real Estate Investor:** Needs to compare the price-per-square-foot across different neighborhoods to quickly identify undervalued properties.
5. **Data Analyst:** Needs advanced filtering capabilities to isolate specific housing features and evaluate their historical impact on market value.

Data & Technical Architecture

6. **Core Data Sources:** Blending **Zillow Public Data** (spatial metrics, sale prices, dates) with **Kaggle Datasets** (square footage, room counts, property age).
7. **Key Performance Indicators (KPIs):** Tracking **Median Sale Price**, **Average Price per Sq Ft**, **Days on Market Trend**, and a custom **Price-Feature Correlation Index**.
8. **Technical Considerations:** Accounting for Tableau version compatibility, expected user concurrency, data refresh frequencies, and automated data cleaning rules (handling missing or standardized values).
