

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

TEAM ID	SWTID2026-3387
PROJECT TITLE	Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
MAX MARKS	5 MARKS

CHAPTER – IV

4.1 – Problem Solution Fit

Problem

The real estate market generates large amounts of housing data, making it difficult for buyers, sellers, investors, and analysts to identify meaningful trends. Traditional spreadsheets and static reports are time-consuming to analyze and do not provide clear insights into factors affecting house prices, such as property size, number of bedrooms, bathrooms, renovation history, and location. This makes it challenging to make informed decisions based on the available data.

Solution

The project uses Tableau to transform raw housing data into interactive dashboards and visualizations that simplify the analysis of housing market trends. Users can explore average sale prices, house age, basement area, renovation status, and other property features through dynamic charts, filters, and dashboards. The interactive nature of Tableau enables users to analyze data from multiple perspectives and identify patterns quickly.

Problem–Solution Fit Points

Converts complex housing datasets into easy-to-understand visual dashboards.

Provides interactive charts for better exploration of housing market trends.

Enables quick analysis of average sale prices and property characteristics.

Helps identify relationships between house features and sale prices.

Simplifies comparison of renovated and non-renovated properties.
