

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

TEAM ID	SWTID20026-3387
PROJECT TITLE	Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
MAX MARKS	1 MARK

5.4 – Team Management Tool for Agile Planning (Jira)

Team Management Tool for Agile Planning (Jira)

Jira is used as the Agile project management tool to organize, monitor, and manage the development activities of the project. It provides a structured environment for planning tasks, assigning responsibilities, tracking project progress, and ensuring that all milestones are completed within the scheduled timeline. Using Jira enables the team to follow Agile practices by dividing the project into manageable tasks and tracking their completion through different stages.

At the beginning of the project, all requirements are converted into user stories and tasks. These tasks are organized into sprints based on the project schedule, including data collection, data preparation, data visualization, dashboard creation, storyboard development, web integration, testing, documentation, and project deployment. Each task is assigned to the appropriate team member with a priority level and due date.

The Jira board allows the team to monitor task progress using workflow stages such as **To Do**, **In Progress**, **Review**, and **Done**. Team members regularly update the status of their assigned tasks, making it easy to identify completed work, pending activities, and any issues that require attention. This improves transparency and ensures effective collaboration throughout the project.

Jira also supports sprint planning, issue tracking, and progress reporting. Project managers and mentors can review sprint performance, monitor task completion, and provide feedback whenever necessary. The use of Jira helps the team maintain an organized workflow, reduce delays, and complete the project efficiently.

Agile Workflow in Jira

- Create project backlog.

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

- Define user stories and tasks.
- Plan sprint activities.
- Assign tasks to team members.
- Update task status regularly.
- Review completed work.
- Resolve issues and bugs.
- Complete sprint reviews.
- Prepare final project release.

Project Tasks Managed in Jira

- Housing dataset collection.
- Data connectivity with Tableau.
- Data cleaning and preparation.
- Creation of Tableau worksheets.
- Dashboard development.
- Storyboard creation.
- Tableau Public publishing.
- Flask web integration.
- Performance testing.
- Documentation preparation.
- Demo video creation.
- Final project deployment.

Benefits of Using Jira

- Organizes project tasks efficiently.
- Supports Agile sprint planning and execution.
- Provides clear task assignment and ownership.
- Tracks project progress in real time.
- Simplifies issue and bug tracking.
- Improves collaboration among team members.
- Monitors sprint completion and deadlines.
- Enhances productivity through structured workflows.
- Provides reports for project performance analysis.
- Ensures timely and successful project completion.
