

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

9.2 - Disadvantages

1. Tableau needs data to work properly. If the data is incomplete or incorrect it can produce charts that're misleading and conclusions that are not accurate.
2. Tableau has limited ways to prepare data. It can do cleaning but for complex transformations you need to use other tools like Python or Excel.
3. Here are some things to consider when using Tableau:
 - i. High cost: Tableau Creator and enterprise editions can be expensive for students or small organizations.
 - ii. Performance issues: large datasets or dashboards with many visualizations can load slowly.
 - iii. Learning curve: Advanced features like calculated fields and dashboard actions require practice to master.
 - iv. predictive analytics: Tableau can do basic forecasting but it is not a replacement for advanced machine learning tools.
 - v. Dependence on data quality: Poor-quality data leads to insights and incorrect business decisions.
 - vi. Internet requirement: Tableau Cloud features need an internet connection to work.
 - vii. free version: Tableau Public has restrictions, including making uploaded dashboards visible to the public.
 - viii. Customization limits: Some advanced visualizations need extensions or custom coding.
 - ix. Hardware requirements: Large dashboards may need systems with RAM and faster processors.
 - x. Data security concerns: Sensitive information must be managed carefully when dashboards are shared.
 - xi. Complex dashboard design: Creating interactive dashboards can be difficult for beginners.
 - xii. Version compatibility: Different Tableau versions may not support the features.
 - xiii. Regular updates: Tableau dashboards need maintenance when datasets or business requirements change.
 - xiv. Not ideal for statistical analysis: Advanced statistical modeling is better done using Python or specialized analytics software.
 - xv. collaboration: Real-time collaboration depends on the Tableau edition and deployment method.
 - xvi. Data connection limitations: Some databases may need drivers or configuration.
 - xvii. Export limitations: Interactive features can be lost when dashboards are exported as images or PDFs.
 - xviii. Dependence, on source data: Tableau visualizes existing data. It cannot improve or correct inaccurate source information.
