

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

CHAPTER – X

10.1 -CONCLUSION

This project was able to look at housing market trends by making it easy to see how property sale prices and important housing features are connected using Tableau. The interactive dashboards and charts made it simple to find patterns compare the characteristics of properties and understand what affects the prices of houses.

The project showed that things like the area of a house the number of bedrooms, bathrooms, floors, basement area whether it has been renovated and how old the house is have an impact on sale prices. Houses that are bigger and have modern things tend to sell for money while older or smaller houses usually sell for less. Looking at sales trends over time also showed how they changed from year to year.

Tableau is really good at helping us visualize data so we were able to turn housing data into useful and easy to understand information. The dashboards let users look at the data in a hands-on way, which helps them find trends and make decisions.

Overall this project shows that looking at data in a way is a good way to understand what is happening in the real estate market. The information we found can help people who are buying or selling homes, real estate professionals, investors and people who make policies make decisions based on facts. In the future we could make this project better by adding more things like where the houses are what is around them how the economy is doing and what is happening in the market right now to get a more complete picture of the housing market.

This can help homebuyers, sellers, real estate professionals investors and policymakers make choices. Housing Market Trends are important for Housing Market. The Housing Market Trends can be used to make decisions. The project is, about Housing Market Trends..1 - Conclusion
