

CHAPTER – XI

FUTURE SCOPE

11.1 - Future Scope

1. The project can be expanded in several ways to provide more accurate insights and support better decision-making in the real estate industry. Future improvements include:
2. **Real-Time Data Integration**
 - a. Connect Tableau with live real estate databases or APIs to display up-to-date housing prices and market trends.
3. **Predictive Analytics**
 - a. Integrate machine learning models to forecast future house prices based on historical sales data and property features.
4. **Geographic Analysis**
 - a. Use interactive maps to analyze property values by city, neighborhood, or postal code, helping users identify high-demand locations.
5. **Advanced Market Segmentation**
 - a. Categorize properties based on price range, property type, customer preferences, and demographics for deeper analysis.
6. **Economic Indicator Integration**
 - a. Include factors such as interest rates, inflation, employment rates, and economic growth to understand their impact on housing prices.
7. **Interactive Dashboards**
 - a. Develop more advanced dashboards with dynamic filters, drill-down analysis, and customizable reports for different users.
8. **Mobile Accessibility**
 - a. Optimize dashboards for smartphones and tablets, allowing users to access housing insights from anywhere.
9. **Customer Recommendation System**
 - a. Suggest suitable properties based on user preferences such as budget, location, number of bedrooms, and amenities.
10. **Cloud-Based Deployment**
 - a. Publish dashboards on Tableau Server or Tableau Cloud for secure access and collaboration among multiple users.
11. **Data Security and Automation**
 - a. Implement automated data refresh schedules and enhanced security features to ensure reliable and secure reporting.

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

Project Scope

12. The scope of this project is to analyze housing market data using Tableau and transform raw data into meaningful visual insights. The project focuses on identifying trends in sale prices and understanding how different property features influence market value.
13. The project includes:
 14. Collecting and preparing housing market datasets.
 15. Cleaning and transforming data for accurate analysis.
 16. Creating interactive Tableau dashboards and stories.
 17. Analyzing key metrics such as average sale price, house age, basement area, number of bedrooms, bathrooms, floors, and renovation status.
 18. Comparing housing trends across different years.
 19. Helping buyers, sellers, investors, and real estate professionals make informed decisions through visual analytics.
